Note—This series; like the last preceding, includes several woody plants which in Cuba are found only in cultivation. For these and numerous native species I am indebted to the great courtesy of the gentlemen in charge of the Botanical Garden in Havana. Counting the supplementary numbers, which are not enumerated above, subscribers may expect to receive about 230 species. I expect to send out all the plants fully named, and hope to be able to supply the few names lacking in, Series II.
